PRODUCT GUIDE 2023

RAHN

Your partner for excellence

Contents

This guide includes our most successfully used and commercially fully supported products. If your requirements cannot be met with any of these products, please contact us directly to help you find a solution.

Worldwide support

for your energy curing systems

Energy Curing – a diverse range of applications

What is the best way to get ink to adhere to laminated paper? How do objects created with a 3D printer keep their shape, and what kind of adhesive is required for immediate curing? You can overcome these and countless other challenges using ultraviolet and electron beam curing techniques. This Product Guide contains details of our main commercially available raw materials – additives, oligomers, reactive diluents, photoinitiators and other specialty chemicals. These can be used for an extremely wide range of applications – in inks, coatings, adhesives, medical products and rapid prototyping.

Can't find what you're looking for?

Our Product Guide lists the key features of our main products. If you can't find the specific feature you require, please get in touch with our experts. We will be happy to discuss your particular needs and find an effective solution. We run our own laboratories in Switzerland, United States and China. This has enabled RAHN-Energy Curing to develop hundreds of starting formulations during the last thirty years and more. Each of them was inspired by a particular industry challenge.

RAHN: Swiss expertise
all over the world

Regulatory directives and requirements are constantly changing. This makes it increasingly costly and complicated to register new products (e.g. REACH). Our competence center helps you maintain an overview of regulations worldwide. Our specialists will be happy to provide you with one-to-one advice on health & safety issues and registering products internationally.

Your partner, not just any supplier
We have been researching, producing and supplying customized specialty chemicals for more than thirty years. Over time, we have nurtured long-standing partnerships with our customers. This kind of collaboration is the only way to find the optimum answer to the challenges that you face.

A Swiss family-run company – in its third generation
RAHN is an independent Swiss family-run company. It is now in the hands of the third generation. Thanks to our financial independence, we are able to make swift business decisions and entertain long-term commitments.

Profound experience in the sector
Our crucial success factors are the specialist skills and expert knowledge of our staff. They are able to advance day by day in our open and transparent culture. We have an extremely loyal team of employees, so you will continue to deal with the people you know as time passes by.

Be inspired

Our customers create amazing results with our raw materials for digital inkjet printing – no matter whether gloss, matte, or even 3D effects. What's more, they can be used to print on almost any material. Whether, paper, glass, wood, plastic or metal, we have the right products to meet all sorts of needs and technical requirements.

Eye-catching food packaging
Food packaging jostles for customers' attention on supermarket shelves and in the aisles. Our specially developed products with their high molecular weight ensure that the inks contain no undesirable substances that might penetrate the packaging. This keeps the food safe and lets the advantages of radiation-curing ink systems shine out for all to see.

Shape-retaining workpieces created with 3D printing
Our customers not only use our products to create 3D effects, but also generate robust workpieces with their 3D printers. Our raw materials reduce shrinkage and ensure objects match our customers' precise specifications.

Tap into our expertise
Would you like to know more? Our Product Flashes give details on specific products or applications whilst our Lab Reports contain the latest findings in our laboratories – e.g. for 3D printing, LED and digital or inkjet printing. You can find out more at www.rahn-group.com/news.

Use our laboratories
Would you like to work together with us to find out what works and to produce the optimum result for your project? Our laboratories are at your disposal – for training your staff as well, should you wish.

Expertise boosts
customer confidence

Specializing in UV and electron beam technology, our Energy Curing experts have an international remit. We want to be more than a supplier for our customers. Our goal is to be a reliable partner to help drive their business forward and generate measurable benefits.

Ana Patricia Rahn Erden
Company Owner

"It has always been important for my father Hans Konrad Rahn, to create an interesting work environment and grant the employees considerable freedom to achieve the company's goals. It was one of my aims to follow his thoughts in the third generation."

Ethric Huang
Head of Application Laboratory RAHN China

"RAHN-products are designed and developed in our three laboratories (Switzerland, USA and China). In addition, we have conducted extensive application research for these products in various fields to ensure that precise solutions are offered to customers."

Sue Howell
Customer Service RAHN USA

"Customer service is our main priority, we work quickly and efficiently to ensure that each goal is met with every customer order."

Thibaud Pagès
Technical Sales Manager, France / Benelux

"The customer contact is one of the most important topics to me – it allows me to develop a solution together with the customer and helps to build a reliable partnership."

Features

85 = The bio content figures, in this case 85%, listed in this brochure are measured using the standard ASTM D6866 analyses. D6866 uses the measured carbon-14 content to calculate the bio-based carbon content of the product and hence shows how much of the product is derived from plant components versus petroleum-derived components. The bio-based product is therefore expressed as a percentage of the overall weight of the product in question (EN16785-1). It should also be noted that the bio-based content of a material is not an indicator of the biodegradability of the material and not all bio-based bioplastics are biodegradable.

GENOMER* 4205	Aliphatic Urethane Methacrylate	2	25 A	–	9 000	99	1,483	R	L	L	N	+	++	+	++++	++++	++	DNC, ADH, 3DP	High E-modulus and good tensile strength, other characteristics are its light stability, abrasion and chemical resistance
GENOMER* 4247 ◊	Aliphatic Urethane Methacrylate	2	25 A	–	10 000	134	1,484	R	L	L	N	+	++	+	++++	++++	++	DNC, ADH, 3DP	Exceptional hardness and mechanical properties, high scratch and abrasion resistance, highest transparency and clarity, high gloss, low yellowing, tin free
GENOMER* 4256	Aliphatic Urethane Methacrylate	2	1 G	–	15 000▲	-19	1,487	R	L	L	N	+	++	++++	+	+	+++	DNC, ADH, 3DP	Excellent elasticity and elongation, improves light stability and chemical resistance
GENOMER* 4277	Aliphatic Urethane Methacrylate	2	1 G	–	19 000 (60°C/140°F)	8	1,491	R	L	◑	N	+	+++	++++	+++	+++	++++	DNC, ADH, 3DP	High flexibility and toughness, high transparency and low yellowing, good adhesion, low cure exotherm
GENOMER* 4297	Aliphatic Urethane Methacrylate	2	20 A	–	8 700	130	1,485	R	L	L	N	+	++	+	++++	++++	++	DNC, ADH, 3DP	Good stain and chemical resistance as well as high tensile strength and E-modulus, good abrasion resistance and very low yellowing
Specialities																			
GENOMER* 7244	Modified Methacrylate	2	1G	5	15000	125	1,535	R	L	L	L	+	+	+	++++	++++	+++	DNC, 3DP	High E-modulus and good tensile strength giving excellent rigidity to 3D parts. Good adhesion, abrasion and scratch resistance

▲diluted in 20% Toluene for measuring purposes only

◊tin free (free of intentionally added tin compounds)
